FEATURED MANUFACTURER: STINGRAY SYSTEMS

JSAMINC.COM

Featured Insight

Why Tepid Water Matters

From laboratories and manufacturing facilities to schools and healthcare campuses, Stingray systems deliver dependable performance when safety matters most.

Emergency eyewash and drench shower systems are only effective when users can safely remain under the water for the required flushing period.

Water that is too hot or too cold can discourage proper use and may even worsen injuries. Tepid water systems help provide a comfortable and safe flushing environment during emergency situations.

Stingray Systems specializes exclusively in engineered tepid water solutions designed to support ANSI/ISEA Z358.1 requirements while simplifying installation and maintenance.

Emergency Safety Solutions

Reliable Tepid Water Systems for Every Facility

When an emergency occurs, every second counts. Stingray Systems designs complete tepid water solutions engineered to provide safe, dependable water temperatures for emergency showers and eyewash stations.

Whether your project requires a stand-alone tempering system, a packaged skid, or a fully integrated emergency safety solution, Stingray offers innovative products built for commercial, industrial, laboratory, and institutional applications.

Engineered for performance and reliability, Stingray systems help facilities improve emergency preparedness while supporting compliance with ANSI/ISEA Z358.1 standards.

Available in a variety of configurations, Stingray products simplify installation, reduce maintenance requirements, and provide peace of mind for facility owners, engineers, and contractors.

Emergency Fixtures & Safety Solutions

Engineered emergency equipment designed to protect personnel and support ANSI/ISEA Z358.1 compliance.

Emergency Shower / Eyewash Solutions

Stingray floor mounted combination units provide immediate access to both emergency shower and eyewash protection in a single, space-efficient fixture.

Available in both epoxy-coated and stainless steel configurations, these units are designed for commercial, industrial, laboratory, and institutional environments where reliable emergency response is critical.

Choose from:

- Combination Shower & Eyewash Stations
- Floor Mounted Eyewash Models
- Stainless Steel Configurations
- High Visibility Epoxy-Coated Models

These fixtures deliver dependable performance while helping facilities meet emergency safety requirements.

With Valve or Without Valve Options

Ideal for indoor commercial and institutional applications, Stingray recessed cabinet units provide convenient access while maintaining a clean, streamlined appearance.

Available configurations include:

- Units with integrated tempering valve
- Units without valve for field customization
- Eyewash and Facewash models
- Recessed and semi-recessed designs

These space-saving solutions provide immediate emergency response while minimizing intrusion into occupied areas.

Need a Replacement?

Looking to replace an existing emergency fixture?

Contact Jensen Sales & Marketing for complimentary crossover assistance. We'll help identify the proper replacement and recommend equivalent Stingray solutions for your project.

Complimentary Crossover Assistance Available.

Complete Emergency Fixture Solutions

From manufacturing facilities and laboratories to schools and healthcare environments, Stingray offers a complete range of emergency safety fixtures designed for dependable operation when every second counts.

Whether your project requires a floor mounted combination unit, a recessed cabinet station, or a custom emergency solution, Jensen Sales & Marketing can help identify the best option for your application.

Our team provides specification assistance, product recommendations, and project support throughout the design and installation process.

SV125

Featured Valve Series

Emergency Mixing Valve Solutions

Stingray's emergency thermostatic mixing valves are engineered to provide dependable tepid water delivery for emergency eyewash and drench shower applications. Designed to support ANSI/ISEA Z358.1 requirements, these valves deliver safe, consistent performance when it matters most.

7 GPM

7 GPM Emergency Shower & Eyewash Valve

Key Features:

- Specifically designed for eyewash applications
- Low-flow capability
- Lead-free construction
- Integral cold water bypass
- Compact, easy-to-service design

Typical Applications:

Ideal for individual emergency eyewash and eye/face wash fixtures in laboratories, schools, healthcare facilities, and industrial environments.

SV160

25 GPM

25 GPM Emergency Shower & Eyewash Valve

Key Features:

- Integral cold water bypass
- Positive hot water shutoff
- Patented design
- Powerful liquid-filled thermostat
- Exceeds ASSE 1071 requirements

Typical Applications:

Ideal for single emergency showers and combination shower/eyewash stations where reliable tepid water delivery is required.

60 GPM

60 GPM Emergency Shower & Eyewash Valve

Key Features:

- High-capacity flow design
- Integral cold water bypass
- Positive hot water shutoff
- Liquid-filled thermostatic motor
- Designed for multiple fixtures

Typical Applications:

Perfect for applications serving multiple emergency showers and eyewash stations throughout a facility.
